The Dallas Group was established in 1989 as a spin-off of Reagent Chemical, a specialty chemical company. We're the world's premier producer of adsorbent synthetic magnesium silicate, marketed under the name MAGNESOL® XL. Since 1973, we've been producing MAGNESOL® XL for the filtration of edible oils in the foodservice industry. MAGNESOL® XL is a safe, pure white, FDA & USDA-approved adsorbent filter powder that contains no crystalline silica. A food grade chemical, MAGNESOL® XL removes both solid and dissolved impurities from used edible oils, which extend the usable life of the oil and maintain a more consistent quality fried product.
